Summary

B.Tech Artificial Intelligence & Data Science student with experience in Full-Stack Development, Machine Learning, and Generative AI. Skilled in Python, JavaScript, SQL, Flask, Node.js, Machine Learning, and Data Analytics. Developed AI-powered applications, predictive models, and intelligent software solutions for real-world problems.

Experience

Machine Learning Intern — Prodigy Infotech

June 2026

- Developed machine learning solutions across regression, clustering, image classification, and computer vision domains.
- Built House Price Prediction and Customer Segmentation systems using Linear Regression and K-Means Clustering.
- Implemented Cat vs Dog Classification, Hand Gesture Recognition, and Food Recognition projects.
- Applied data preprocessing, feature engineering, model evaluation, and visualization techniques using Python and Scikit-learn.

Technical Skills

Languages: Python, SQL, JavaScript

Machine Learning: Scikit-learn, Regression, Classification, Clustering, Feature Engineering, Model Evaluation

Generative AI: OpenAI API, LLM Integration, Prompt Engineering, RAG

Web Development: HTML, CSS, Flask, Node.js, Express.js

Databases: MySQL, MongoDB

Tools: Git, GitHub, VS Code, Jupyter Notebook, Power BI

Projects

Code Morphic – AI-Powered Code Translation Platform

- Developed a full-stack AI platform that translates code between multiple programming languages using LLM APIs.
- Implemented code optimization, complexity analysis, debugging assistance, and code explanation features.
- Built REST APIs using Node.js and Express with authentication and translation history management.
- Applied prompt engineering and context-aware processing to improve translation quality and user experience.

Hand Gesture Recognition System

- Developed a computer vision model capable of recognizing and classifying multiple hand gestures from image data.
- Performed image preprocessing, feature extraction, model training, and performance evaluation using Python and Machine Learning techniques.
- Enabled gesture-based human-computer interaction for intuitive and touchless control systems.

Food Recognition and Calorie Estimation System

- Built an image-based food recognition model to identify food items from photographs.
- Applied computer vision and machine learning techniques for food classification and calorie estimation.
- Designed a solution to support dietary tracking and informed nutritional decision-making.

Education

Bachelor of Technology (Artificial Intelligence & Data Science)

Graduation: 2027

Wainganga College of Engineering and Management, Nagpur

CGPA: 7.0/10

Certifications

Data Science Bootcamp: From Analyzing Data to Creating ML Models – GeeksforGeeks

Python, Full Stack Development & Gen AI Certification – GeeksforGeeks
